

How to install the Azure CLI

Article • 05/29/2022 • 2 minutes to read

The Azure CLI is available to install in Windows, macOS and Linux environments. It can also be run in a Docker container and Azure Cloud Shell.

Install

The current version of the Azure CLI is **2.41.0**. For information about the latest release, see the [release notes](#). To find your installed version and see if you need to update, run [az version](#).

- [Install on Windows](#)
- [Install on macOS](#)
- Install on Linux or Windows Subsystem for Linux (WSL) ([What is WSL?](#))
 - [Install with apt on Debian or Ubuntu](#)
 - [Install with dnf on RHEL, Fedora, or CentOS](#)
 - [Install with zypper on openSUSE or SLE](#)
 - [Install from script](#)
- [Run in Docker container](#)
- [Run in Azure Cloud Shell](#)

ⓘ Note

If you're using the Azure classic deployment model, **install the Azure classic CLI**.
